PRISHA S

Product Engineer

Bangalore, India | prishdixit@gmail.com | +91 9663523939 | LinkedIn | GitHub | Portfolio | Behance

SUMMARY

Product engineer with a designer's eye and a builder's instinct. Started in UI/UX, winning two inter-college design competitions, then learned to code because a design isn't a product until it ships. Now owns features end to end, from the first user flow to the database behind it, and built Vibe, a full-stack app, entirely solo. Happiest close to the user, turning rough ideas into things people actually use.

SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Vite, Tailwind CSS, Framer Motion, responsive & animated UI

Backend & Database: Node.js, Express.js, RESTful APIs, third-party & LLM API integration, authentication, SQL, PostgreSQL, Redis, database schema design, pgAdmin

DevOps & Tools: Linux, Docker, Kubernetes, Git, GitHub, Postman, Vercel, Render, n8n (workflow automation)

UI/UX Design: Figma, Framer, Adobe Illustrator, Adobe Photoshop, wireframing, user flows, interaction design, prototyping, design systems, accessibility

EXPERIENCE

UI Designer & Developer Intern · Hocon Technologies Pvt Ltd | Apr 2026 – Jul 2026

- Shipped four production modules (authentication, project dashboards, issue tracking, dependency management) for the company's in-house ERP, used by a 21-person internal team.
- Built a reusable UI pattern library (cards, filters, modals) adopted across all four modules, and designed the PostgreSQL schema behind them.
- Tested and verified every REST endpoint in Postman before each module shipped.
- Gathered requirements directly from stakeholders and iterated on real usage feedback, owning each module from design through build with no separate handoff.

Design Intern · Lxl Ideas | Sep 2024 – Oct 2024

- Designed accessible, responsive Figma interfaces for the Krayon educational app, mapping user journeys for a non-technical audience.
- Restructured the product landing page's information hierarchy and visual system with developers and content teams, and supported it through implementation.

PROJECTS

Mentioned Live | *React, TypeScript, Node.js, Hono, Gemini API*

- Built and shipped a live product that shows brands whether ChatGPT, Gemini and Claude recommend them when shoppers ask what to buy. An LLM writes 10 shopper questions, every assistant answers in parallel, and a second pass extracts which brands get named and in what order.
- Turned free-text AI answers into a position-weighted visibility score, competitor ranking and three concrete fixes, streamed live over SSE; deployed on Vercel, Render and Upstash Redis with rate limiting, retries and a daily spend cap.

Vibe Live | *React, Vite, Framer Motion, Node.js, Express, PostgreSQL, YouTube Data API*

- Designed and built a full-stack lifestyle web app solo, from React/Vite front end to Node/Express API and PostgreSQL database. It maps a user's daily mood to a "vibe" archetype, with mini missions, a visual life record (Life Mosaic) and photo sharing between friends.
- Integrated the YouTube Data API for mood-based music recommendations, handling authentication, rate limiting and response shaping.
- Created the dark-mode design system (typography, motion, component library) and implemented it directly in React and Framer Motion.

Personal Portfolio Live | *React, Vite, Framer Motion*

- Designed and coded a custom portfolio site with an original ink-and-bronze visual system, Instrument Serif type and hand-choreographed Framer Motion animation.
- Built an interactive Namma Metro–themed scene (illustrated train, route map, live departure board) as a custom component in place of a stock carousel.

Lame Rides Behance | *Figma* | *1st Place, Anokhya 2.0 Inter-College UI/UX Competition*

- Designed a public transport app around route planning and real-time bus tracking, taking it from user research to a high-fidelity prototype.

Connect Smart Behance | *Figma* | *3rd Place, Tech Desafío Inter-College UI/UX Competition*

- Designed a smart-home management concept with customizable dashboards and automation controls, backed by a full design system.
