SUMMARY

Creative developer who designs the interface and then builds it — no handoff, no telephone game between Figma and code. I ship motion-driven, interaction-first products end to end: React front-end, database schema, and the Framer Motion detail that makes it feel considered. My focus is enterprise software that doesn't look or move like enterprise software.

SKILLS

- Design & Motion: Figma, Adobe Illustrator, Adobe Photoshop, Framer, Framer Motion, interaction design, prototyping, design systems
- Front-End Engineering: React.js, TypeScript, JavaScript, HTML, CSS, responsive & animated UI
- Back-End & Data: Node.js, SQL, PostgreSQL, pgAdmin
- Tools & Workflow: Git, GitHub, Postman, n8n (workflow automation)

EXPERIENCE

UI Designer & Developer Intern — Hocon Technologies Pvt Ltd

Apr 2026 – Aug 2026

- Designed and built interface modules — authentication, project dashboards, issue tracking, dependency management — for the company's in-house ERP, built for the company's 21-person internal team, translating raw business requirements directly into shipped screens rather than handoff mockups.
- Established interaction and layout patterns (cards, filters, modals) reused across modules, and designed the PostgreSQL schemas behind them — tested via Postman — so interface decisions stayed grounded in what the data actually supported.
- Worked directly with stakeholders to scope requirements, then iterated the design through real usage feedback rather than a single upfront handoff.

Designer — Lxl Ideas

Sept 2024 – Oct 2024

- Designed accessible, responsive interfaces for the Krayon educational application in Figma, focused on clear user journeys for a non-technical audience.
- Rebuilt the product landing page's information hierarchy and visual system, working alongside developers and content teams to carry the design through to implementation.

SELECTED WORK

Personal Portfolio — *React, Vite, Framer Motion — self-directed*

- Designed and coded a from-scratch portfolio site built around a custom ink-and-bronze visual system, Instrument Serif display type, and Framer Motion choreography rather than template animation.
- Built a fully custom interactive scene — a Namma Metro-themed showcase with an illustrated train, route map, and live departure board — as a from-scratch component rather than an off-the-shelf carousel.

Hocon-ERP — *React.js, Node.js, PostgreSQL — independent build*

- Built a full-stack ERP application end to end as an independent build: authentication, project dashboards, issue tracking, dependency management, and project workflows.
- Implemented the React.js front end and Node.js backend personally, with PostgreSQL schemas designed in pgAdmin and endpoints verified in Postman.

Lame Rides — *Figma — 1st Place, Anokhya 2.0 UI/UX Competition*

- Public transport app centered on route planning and real-time bus tracking, from user research through high-fidelity prototype.

Connect Smart — *Figma — 3rd Place, Tech Desafio UI/UX Competition*

- Smart-home management app with customizable dashboards and automation controls, built with a full end-to-end design system.

My Glow / Flow Sheet — *Figma — independent design projects*

- My Glow: onboarding and checkout flows for a beauty e-commerce concept. Flow Sheet: a workflow tool replacing spreadsheets with structured lead-tracking screens.

EDUCATION

Dayananda Sagar Academy of Technology and Management

Bachelor of Technology in Computer Science and Design — CGPA: 8.6 — 2022–2026
